

## WHO IS DATTO?

Datto offers Total Data Protection for small to mid-sized businesses around the world through a network of Managed Service Providers (MSPs). Datto's solutions deliver uninterrupted access to business data whether that data is stored on site, in transit or in the cloud.

## WHAT DOES DATTO OFFER?

### Data Backup and Disaster Recovery

Datto's business continuity and disaster recovery solutions secure essential business data for thousands of companies around the world. The company's market leading SIRIS 3 is the first data protection platform that protects any physical, virtual and cloud infrastructure running on Windows, Mac or Linux. Datto's technology ensures a business can be up and running within minutes after an incident (whether it be a natural disaster or ransomware attack).

### Cloud-to-Cloud Data Protection

A reported 1 in 3 companies report losing data stored in cloud-based applications from situations like end user accidental deletion, malicious employee activity, cyber attacks, and more. As companies increasingly move more data into SaaS applications, Datto SaaS Protection ensures business data stored in the cloud (e.g. Office 365 or G Suite) is backed up and protected.

### Managed Networking Services

Datto's Managed Networking Services delivers Network Continuity with always connected WiFi and fully integrated 4G LTE failover and failback. The product line, optimized for deployment in small to medium-sized businesses, includes a collection of high-performance, networking devices complete with centralized, cloud-based management. Datto's Managed Networking products consist of the Datto Networking Appliance, Datto Networking Switches and Datto Networking WiFi.
